Garantie

DOSATRON INTERNATIONAL S.A.S. s'engage à remplacer toute pièce reconnue défectueuse d'origine pendant une période de douze mois à compter de la date de l'achat par l'acheteur initial.

Pour obtenir le remplacement sous garantie, l'appareil ou la pièce détachée doit être renvoyé avec la preuve d'achat initial au fabricant ou au distributeur agréé.

Il pourra être reconnu défectueux après vérification des services techniques du fabricant ou du distributeur.

L'appareil doit être rincé de tout produit chimique et envoyé au fabricant ou au distributeur port payé, puis il sera retourné gratuitement après réparation si celle-ci est couverte par la garantie.

Les interventions réalisées au titre de la garantie ne pourront avoir pour objet d'en prolonger la durée.

Cette garantie ne s'applique qu'aux défauts de fabrication.

Cette garantie ne couvre pas les défauts constatés provenant d'une installation anormale de l'appareil, de la mise en œuvre d'outillages non appropriés,

d'un défaut d'installation ou d'entretien, d'un accident d'environnement ou par la corrosion due à des corps étrangers ou des liquides trouvés à l'intérieur ou à proximité de l'appareil.

Pour le dosage de produits agressifs, merci de consulter votre vendeur avant toute utilisation pour confirmer la compatibilité avec le doseur.

Les garanties ne comprennent pas les joints (pièces d'usure) ni les dommages causés par les impuretés de l'eau, tel que le sable.

Un filtre (ex. : 300 mesh - 60 microns selon la qualité de votre eau) doit être installé devant l'appareil pour valider cette garantie.

DOSATRON INTERNATIONAL S.A.S. décline toute responsabilité si l'appareil est utilisé dans des conditions non conformes aux prescriptions et tolérances du manuel d'utilisation.

Il n'y a pas de garantie explicite ou implicite relative à d'autres produits ou accessoires utilisés avec les appareils de DOSATRON INTERNATIONAL S.A.S.

CONNAITRE VOTRE DEBIT

UNE METHODE SIMPLE

LE DOSATRON EST CONSTITUE :

D'un moteur hydraulique volumétrique à piston entraînant :

un piston de dosage

Dans son mouvement de va-et-vient, le piston moteur **claque** :

2 clacs = 1 cycle
moteur = 1 cylindrée

1 fois en position haute

1 fois en position basse

La cadence du moteur est proportionnelle au débit d'eau passant par l'appareil.

■ Calcul du débit d'eau en litres/H =

$$\frac{\text{Nombre de clacs en 15 secondes} \times 4 \times 60 \times 1.7}{\text{calcul pour 1 minute} \quad \text{calcul pour 1 heure} \quad \text{cylindrée du moteur en litre}}$$

2 clacs = 1 cycle (2)

■ Calcul du débit d'eau en GPM =

$$\frac{\text{Nombre de clacs en 15 secondes} \times 4 \times 1.7 \times 3.8}{\text{calcul pour 1 minute} \quad \text{cylindrée du moteur en litre} \quad \text{conversion litres en gallons}}$$

2 clacs = 1 cycle (2)

NOTA : Cette méthode de calcul ne saurait remplacer un débitmètre. Elle est donnée seulement à titre indicatif.

Reference designation

Your doser has 2 principal marking zones enabling it to be identified in detail: A 2-line engraving on the edge of the top of the DOSATRON (see picture below), containing the exact reference of the device and the serial number.

A technical label on each side of the doser body indicating the technical performances of the device.

CODIFICATION OF THE REFERENCE

REF. :	Serial #:										
Example	D8	WL	2	N	IE	BP	V	VF	K	P	
Type of Dosatron											
Product line WL: Water Line											
Dosage											
Certification N: Drinking water standard											
IE: External injection											
BP: Integrated By-pass											
V: Viscous Products (> 400 cPs)											
Dosing Seals VF: Acid fluid AF: Alkaline fluid											
K: Strong acids (>15%)											
P: Option body pump PVDF											

The Water Line dosers, the reference of which contains the index «N» after the dosage indication, are certified NSF 61. They are thus certified for use with calcium hypochlorite, the concentration of which does not exceed 65%, and sodium hypochlorite, the concentration of which does not exceed 15%. Also, the temperature of the water processed must not exceed 23°C.

SPECIFICATIONS

	D8WL3000	D8WL3000IE	D8WL2
--	----------	------------	-------

Operating flow range : 500 l/h mini 8 m³/h maxi [2.2 US Pint/min - 40 US GPM].

Maximum operating temperature :40 °C [104 °F]

Operating pressure :

bar	0.15 - 8	0.35 - 8	0.15 - 8
PSI	2.2 - 116	5.1 - 116	2.2 - 116

Externally adjustable or fixed injection rate :

% Ratio	0.03 - 0.125	0.03 - 0.125	0.2 - 2
	1:3000 - 1:800	1:3000 - 1:800	1:500 - 1:50

Concentrated additive injection :

Mini l/h - Maxi l/h	0.15 - 24	0.003 - 9	1 - 160
US Fl. oz/min - MINI	0.08	0.0017	0.56
US GPM - MAXI	0.1056	0.04	0.70

Connections (NPT/BSP male) :Ø 40x49 mm [1 1/2"].

Hydraulic motor capacity (for every 2 clicks of the piston) :
around 1.7 l [0.449 US Gallons]

**NOTE: The Dosatron is not preset,
see chapter DOSING SETTING**

UNIT SIZE

Diameter :	cm ["]	17.55 [6 9/10]	17.55 [6 9/10]	17.55 [6 9/10]
Total height :	cm ["]	66.83 [26 3/10]	70.55 [27 25/32]	64.16 [25 13/50]
Width :	cm ["]	21.8 [8 1/2]	19.023 [7 1/2]	21.8 [8 1/2]
Weight : ± kg [lbs]		3.3 [7.3]	4.1 [9]	3.3 [7.3]

SHIPPING CONTENTS: 1 DOSATRON / 1 mounting bracket for DOSATRON / 1 suction tube of concentrated additive / 1 strainer / 1 injection suction tube for "IE" model / 1 owner's manual

PACKAGE SIZE:

67 x 22.5 x 20.5 cm [26 3/8" x 8 7/8" x 8 1/16"]

PACKAGE WEIGHT: 5.5 kg approx [~ 12.1 US lbs]

DOSATRON Technology

A unique technology associating all dosing functions

Installed directly in the water supply line, the DOSATRON operates by using water pressure as the power source. The water activates the DOSATRON, which takes up the required percentage of concentrate. Inside the DOSATRON, the concentrate is mixed with the water. The water pressure forces the solution downstream. The dose of concentrate will be directly proportional to the volume of water entering the DOSATRON, regardless of variations in flow or pressure which may occur in the main line.

Installation

PRECAUTIONS

1-GENERAL REMARKS

- When connecting a DOSATRON either to the public water supply or to its own water source, you must respect the regulations in force concerning protection of the source i.e. backflow prevention, etc.
- When connecting the DOSATRON to the water supply, ensure that the water flows in the direction of the arrows on the unit.
- In a case where the water installation is higher than the DOSATRON itself, there is a possible risk of water and concentrate flowing back through the DOSATRON. In this case, installing a non-return valve downstream is recommended.
- It is recommended that you should place an anti-siphon valve on the downstream side of the dosing pump in installations in which there is a risk of siphoning.
- Do not install the DOSATRON just above an acid container, (risk of acid fumes attacking the DOSATRON) and protect it from possible contact with corrosive products.
- Protect the DOSATRON from freezing temperatures by draining it and store it away from sources of excessive heat.
- Do not install the DOSATRON on the suction side of the supply pump (risk of siphoning).

⚠ IMPORTANT ! Use no tool or metallic utensils.

- During any intervention the operator must stay in front of the DOSATRON and wear protective eyewear and gloves.
- It is the responsibility of the owner/operator to replace the injection seals annually to ensure precise injection.

The setting of the Dosatron's dosing rate is the sole responsibility of the user. The user has to respect the recommendations given by the manufacturer of the chemical product.

⚠ AVERTISSEMENT

When installing, operating, and maintaining the DOSATRON water powered metering pump, keep safety considerations foremost. Use proper tools, protective clothing, and eye protection when working on the equipment and install the equipment with a view toward ensuring safe operation.

Follow the instructions in this manual and take additional safety measures appropriate to the liquid being pumped and the temperature of the water that powers the DOSATRON.

PRECAUTIONS (cont...)

- Be extremely careful in the presence of hazardous substances (e.g. corrosives, toxins, solvents, acids, caustic, flammables, etc.).
- Before applying any aggressive chemicals, please consult your distributor to confirm compatibility with the dosing pump.

IMPORTANT !

It is the responsibility of the owner/operator to check that the flow and pressure of the installation do not exceed the DOSATRON characteristics.

- Adjustment must be made when there is no pressure in the Dosatron. - Turn off the water supply and allow the pressure to drop to zero.
- It is the responsibility of the owner/operator of the DOSATRON, to determine the correct amount of solution and injection ratio to obtain the desired result.
- An air inlet, an impurity or a chemical attack on seal can interrupt the dosing function. It is recommended to periodically check that the solution is being correctly drawn up into the DOSATRON.
- Change the suction tube as soon as it seems damaged by the chemical.
- Relieve the pressure after use (advised).
- Rinsing of the DOSATRON is

- required :
- . when changing chemicals,
 - . before handling the DOSATRON, to avoid any contact with the chemical.
 - All assembly should be done without tools, hand tighten only.

2 - WATER WITH HIGH PARTICLE CONTENT

- A (ex.: 60 microns - 300 mesh depending on your water quality) water filter must be installed upstream from the DOSATRON (see accessories), if a filter is not installed abrasive substances will cause the DOSATRON to deteriorate prematurely.

3 - WATER-HAMMER / EXCESSIVE FLOW

- For installations subject to water hammer a protection device such as a check valve or union ball check must be fitted (pressure/flow control system).
- For automatic installations, slow opening and closing solenoid valves are preferable.
- In an installation where a DOSATRON serves several sectors, the closing of one sector and the opening of another sector must be done at the same time (simultaneous operation of the solenoid valves).

4 - INSTALLATION LOCATION

- The location of the DOSATRON and concentrate container should be accessible, but should never

present a risk of pollution or contamination.

- It is recommended to label all water lines with a warning about the injected solution i.e.

 IMPORTANT ! Not For Human Consumption.

5 - MAINTENANCE

- Rinse the injection areas after using the DOSATRON. To do this, insert suction tube into a container of clean water and inject about 1/4 liter [8 1/2 US Fl.oz].
- Routine maintenance once a year will add to the life of your DOSATRON. Replace the injection seals as well as the suction hose annually to ensure proper injection.

6 - SERVICE

- This DOSATRON was tested prior to packaging.
- Complete maintenance and seal kits are available.
- Call your DOSATRON distributor for service or parts.

ASSEMBLING THE DOSATRON

Fig. 1

ASSEMBLY SHOULD BE CARRIED OUT WITHOUT THE USE OF TOOLS

The DOSATRON is delivered with :

- a mounting bracket,
- a suction tube with a strainer.

The bracket enables the DOSATRON to be fixed to a wall.

Snap the DOSATRON into the bracket by fitting the two lugs on one side of the body (Fig. 1-A) into the corresponding holes in the bracket (Fig. 1-B), and springing the bracket arms apart until the other 2 lugs click into place.

Remove the plastic caps (Fig. 1-C) which block the inlet and outlet of your DOSATRON before connecting to the water supply.

RECOMMENDATIONS

The DOSATRON can be connected to the water supply by means of $\varnothing 40 \times 49$ [1 1/2"] bore flexible hose and hose tail fittings with hose clips. Make certain that the water flows in the direction of the arrows on the motor body.

The DOSATRON is delivered with a suction tube (cut it to the needed length) enabling its use with a large capacity concentrate container. The tube must be fitted with its strainer and weights. The instructions for fitting the tube are to be found in the specific chapter.

NOTE : The maximum suction height is 4 meters (13 vertical feet).

Fit the tube, equipped with its strainer and its weight, and immerse it in the solution to be injected.

CONNECTING THE EXTERNAL INJECTION (IE)

MODEL D8WL3000IE

This model of Dosatron is supplied with an external injection pipe. Remove the external protective plugs which seal the orifices of your DOSATRON and your external injection kit.

WARNING: do not use excess force when screwing the elements together.

ASSEMBLING THE DOSATRON (cont...)

IMPORTANT ! - Do not put the suction tube strainer on the bottom of the stock solution container. The strainer must be suspended at least 10cm [4"] above the bottom of the tank to avoid sucking up the insoluble particles that may damage the injection assembly (Fig. 2).
 - Do not put the strainer on the ground.

Under no circumstance should the solution level be above the water inlet of the DOSATRON (to avoid siphoning situations) (Fig. 3).

INSTALLATION HINTS

The DOSATRON can be connected to the main water line **directly** (Fig. 4) ; on a **by-pass** (Fig. 5-A), recommended.

If your flow rate is above the operating limits of the DOSATRON, see EXCESSIVE FLOW.

To prolong the working life of the DOSATRON it is advisable to install a filter (ex.: 300 mesh - 60 microns depending on your water quality) upstream.

This is imperative if the water contains impurities or particles, especially if the water comes from

a well.

A filter is recommended and required for the warranty to be valid.

Installing the DOSATRON on a bypass enables clean water to be supplied without operating the DOSATRON and the DOSATRON to be easily dismantled.

When connecting an installation to the public water supply, you must respect the rules and regulations in force in the country.

Fig. 4

Fig. 5-A

EXCESSIVE FLOW (as an indication)

If your DOSATRON clicks more than **40 times in 15 seconds*** (that is 20 cycles), you are close to the superior flow limit. If you need more flow, you must install a DOSATRON with a superior capacity of flow.

THE PRODUCT'S AUTOMATIC ANTI-SIPHONING SYSTEM

- Automatically restores atmospheric pressure within the installation in case of accidental depressurisation* (**Fig. 5-B**). Its use complies with health and safety regulations in force in the country.
- Complies with prescribed regulations.
- When commissioning the machine, remove the red cap.

Fig. 5-B

* Example: where the doser's outlet is lower than the inlet.

Putting the DOSATRON into order

USING FOR THE FIRST TIME

- Partially open the water inlet valve.
- Press the bleed button on the top of the DOSATRON (Fig. 6).

- When a constant flow of water is seen coming from around the bleed button (no more «spitting» of air), release the button.

- Open the water inlet valve slowly, the DOSATRON is self-priming.

- Operate the DOSATRON until the product to be injected is drawn up into the doser body (the product is visible through the plastic tube).

- The DOSATRON makes a characteristic “click-clack” noise when working.

NOTE: The time required to prime the suction tube depends on the water flow-rate, the ratio setting and the length of the suction tube. To bleed the air from the suction tube and accelerate the priming, set the injection rate at maximum. Once the DOSATRON is primed, adjust to the required injection rate (see § ADJUSTING THE INJECTION RATE).

USE

The device is designed to operate with fluids the temperature of which must not exceed 40°C* (engine fluid, additive, engine fluid/additive mixture). In the event of installation subject to operating at temperatures less than 5°C, protect the installation from frost (see precautions instructions). The dosers are designed for use up to 6 bars. The installation must be protected against any overpressure risk. The installation must also be sized to avoid any oscillating hydraulic phenomenon (water hammer). If necessary an anti-water hammer device should be fitted.

*Certification: see codification paragraph.

ADJUSTING THE INJECTION RATE (with pressure off)

IMPORTANT ! Use no tools.

Adjustment must be made when there is no pressure in the DOSATRON.

- Turn off the water supply and allow the pressure to drop to zero.
- Unscrew the blocking ring (Fig. 7).
- Screw or unscrew the adjusting nut in order to line up the 2 peaks of the eyelet with the desired ratio on the scale (Fig. 8).
- Tighten the blocking ring (Fig. 9).

DOSAGE PRINCIPLE

Principle : Setting at 1% \Rightarrow 1/100 = 1 part of concentrate for 100 parts of water.

BY-PASS OPTION

The DOSATRON may be fitted in its upper part with the function by-pass (optional equipment) :

- By-pass in ON, the DOSATRON works and the concentrate is drawn up.
- By-pass in OFF, the DOSATRON is stopped and does not draw up the product.

Maintenance

RECOMMENDATIONS

1 - When using soluble products to be made up into solutions, we recommend the periodic dismantling of the entire dosing part (see : § CLEANING AND REFITTING THE SUCTION VALVE, § CHANGING SEALS IN THE INJECTION ASSEMBLY).

Thoroughly rinsing all the elements of the dosing part with water and re-assembling them after having previously lubricated the seal (Fig. 10) with a silicone lubricant, in the case of difficulty in re-fitting.

Fig. 10

2 - Before putting the DOSATRON into operation after a non-use period, remove the motor piston and soak it into lukewarm water < 40° C [104° F] overnight. This helps to dissolve any deposits which may have dried onto the piston motor.

HOW TO DRAIN THE DOSATRON (in case of freezing temperature)

- Turn off the water supply and let the pressure drop to zero.
- Remove the injection assembly, see § CHANGING THE MOTOR PISTON.
- Remove the bell and the motor piston.
- Disconnect the water inlet and outlet fittings.
- Remove the lower pump body from the mounting bracket and empty any remaining water.
- The DOSATRON can now be reassembled, having first cleaned the seal.

FITTING THE SUCTION TUBE

If the DOSATRON has already been used, please imperatively refer to § PRECAUTIONS.

- Unscrew the nut (Fig. 11) at the bottom of the injection assembly and put it onto the tube.
- Push the tube onto the barbed fitting as far as it will go and screw up the nut by hand (Fig. 12).

CHANGING THE MOTOR PISTON (with pressure off)

Fig. 13

Fig. 14

- Turn off the water supply and allow the pressure to drop to zero.
- Unscrew and remove bell-housing by hand (Fig. 13).
- Remove the motor piston (Fig. 14) by pulling it up.
- Rod and plunger piston are fixed to the motor piston and taken out simultaneously.
- Change and reassemble in the reverse order to the above.
- Refit the bell-housing (take care not to damage its seal) and tighten by hand.

CHANGING SEALS IN THE INJECTION ASSEMBLY (with pressure off)

Frequency : Once per year.

IMPORTANT ! Use no tool or metallic utensils

ADVICE: Before dismantling any part of the injection assembly it is advisable to operate the DOSATRON, injecting clean water so as to rinse through the injection system. In this way, risks of contact with concentrated solutions in the injection assembly are minimized.

During any such intervention, wear protective eyewear and gloves !

METHOD OF REMOVING SEAL

Fig. 15 : Between finger and thumb, pinch the component and the seal ; push towards one side to deform the seal.

Fig. 16 : Increase the deformation to grip the part of the seal thus exposed and pull it out of its groove.

Clean the seal seating without any tools.

Refitting is done by hand.

It is very important that the seal is not twisted once in place as this would impair its efficiency.

Fig. 15

Fig. 16

CHANGING THE PLUNGER PISTON (SEAL EQUIPMENT) D8WL3000 or D8WL3000IE MODEL

Frequency : Once per year.

IMPORTANT ! Use no tool or metallic utensils

ADVICE: Before dismantling any part of the injection assembly it is advisable to operate the DOSATRON, injecting clean water so as to rinse through the injection system. In this way, risks of contact with concentrated solutions in the injection assembly are minimized.

During any such intervention, wear protective eyewear and gloves !

METHOD FOR REPLACING THE PLUNGER PISTON

Use an open-ended 8 spanner to unscrew the worn plunger piston from the plunger catch.

Put the new plunger piston in place (seal factory pre-assembled) screwing it in with the same spanner.

It is very important that the seal is not twisted once in place since this may impair leaktightness.

CHANGING THE EXTERNAL INJECTION SEALS (D8WL3000IE)

Frequency : Once per year.

IMPORTANT ! Use no tool or metallic utensils

ADVICE: Before dismantling any part of the injection assembly it is advisable to operate the DOSATRON, injecting clean water so as to rinse through the injection system. In this way, risks of contact with concentrated solutions in the injection assembly are minimized.

During any such intervention, wear protective eyewear and gloves !

In the event of using with hard water it is recommended that you descale the external injection section at a frequency to be validated on site.

Remove the nuts identified on the view below.

Replace the O-ring seals, the non-return valve, the membrane and the whole seat of the umbrella valves (do not replace the umbrellas alone). Reassemble all the elements in the opposite direction from disassembly taking care to respect the direction of assembly of the membrane and the valve seat (see perspective view)

CHANGING THE EXTERNAL INJECTION SEALS (D8WL3000IE)

CHANGING THE DOSING SEALS

Please refer to the drawings of the different models at the end of this manual

- Change the seals once a year.
- Turn off the water supply and allow the pressure to drop to zero.
- Take off the suction tube of product (Fig. 17).
- Unscrew the retaining ring (Fig. 18).
- Pull downwards to remove the injection assembly (Fig. 19).
- Change the seals, the suction valve and the barbed fitting.
- Re-assemble in the reverse order to the above by hand.

CLEANING AND RE-ASSEMBLING THE SUCTION VALVE SEAL

- Turn off the water supply and allow the pressure to drop to zero.
- Unscrew the nut and pull downwards to remove the suction tube (Fig. 20).
- Unscrew and take off the suction valve retaining nut (Fig. 21), pull out the valve assembly, dismantle the valve and thoroughly rinse the separate components in clean water.
- Put the valve components in the order shown in the diagram (Fig. 22).

Troubleshooting

SYMPTOM	CAUSE	SOLUTION
Motor piston		
DOSATRON does not start or stops	Piston stalled.	Reset piston, by hand.
	Air has not been bled from unit.	Bleed air from unit, by bleed button.
	Maximum flow exceeded.	1. Reduce flow, restart unit. 2. Unscrew the top cap. Take off the piston and check piston valves seals to ensure correct position.
	Motor piston is damaged.	Return unit to your service center for repair.
Injection		
Water flowing back into concentrate container.	Contaminated, worn, or missing check valve parts.	Clean or replace it.
	For IE model: injection module membrane and umbrella valve damaged	Replace the membrane and the valve seat
	For IE model: Non-return valve and umbrella valves damaged or scaled	Descale or replace the non-return valve and the valve seat
No suction of concentrate.	The piston motor has stopped.	See Motor piston section.
	Air leak (inlet) in the suction tube.	Check the tightness between nut and suction hose.
	For IE model: External injection pipe obstructed or scaled.	Descale or replace the external injection pipe
	Blocked suction tube or clogged strainer.	Clean or replace it.
	Missing or worn plunger seal.	Clean or replace it. Version WL3000 : replace the complete plunger assembly (plunger+seal).
	Worn injection stem	Replace it.

SYMPTOM	CAUSE	SOLUTION
Injection		
Under injection.	Suction of air.	<ol style="list-style-type: none"> 1. Check the tightness of the nuts in the injection area. 2. Check suction tube. 3. For the IE (external injection) versions, verify the condition of the external injection pipe
	Dirty or worn check valve seal.	Clean or replace it.
	Max. flow exceeded (cavitation).	Reduce flow.
	Worn plunger seal.	Replace it.
	Worn injection stem	Replace it.
	For the IE models, external injection module and injection T scaled or damaged.	Check the condition of the umbrella valves, of the membrane and of the non-return valve. Descale or replace them as necessary.
Leaks		
Leaks in the vicinity of the fixing ring under the body housing.	Injector sleeve seal is damaged or positioned incorrectly.	Replace it.
Leaks between the setting sleeve and the blocking ring.	Injector stem seal damaged, positioned incorrectly or missing.	Replace it.
Leaks between the body and screw-top.	Screw-top seal is damaged, positioned incorrectly or missing.	Unscrew the screw-top, clean the seal seating, replace or change the seal. Position correctly the screw-top.

SYMPTOM	CAUSE	SOLUTION
Leaks		
Leak between the injection module and the doser body (WL IE models)	Seal of the injection module damaged, incorrectly assembled or absent	Position it correctly, clean the seal seat bearing or replace it.
External leak from the injection module lateral nut.	Nut incorrectly tightened or membrane damaged.	Clean the membrane, replace it if necessary and re-tighten the nut.
Leaks from the injection T.	Internal seals damaged, incorrectly assembled or absent.	Replace.

**THE MANUFACTURER
DECLINES ALL RESPONSIBILITY IF THE DOSATRON
IS USED IN CONDITIONS THAT DO NOT CORRESPOND
TO THE OPERATING INSTRUCTIONS AS INDICATED
IN THIS MANUAL**

Limited Warranty

DOSATRON INTERNATIONAL S.A.S. will provide for replacement of all parts shown to be defective in material or workmanship during a period of twelve months from the date of purchase by the original purchaser.

To obtain warranty replacement of a part, the DOSATRON must be returned with original proof of purchase receipt to the manufacturer or authorized distributor and thereafter recognized as defective after examination by the technical services of the manufacturer or distributor. The DOSATRON must be flushed of any chemical and sent to the manufacturer or distributor prepaid, but will be returned free of charge once repairs are made if found to be covered by the warranty. Any repairs made under warranty will not extend the initial warranty period.

This warranty only covers circumstances where the part has failed due to defects caused by the manufacturing process. This warranty is invalid if the defects are found to be due to the product's misuse, inappropriate use of tools, lack of maintenance or defective installation or environmental accidents or corrosion by foreign bodies and liquids found within or in proximity to the DOSATRON.

Before using any aggressive chemicals, please consult your distributor to confirm compatibility with the dosing pump.

The seals and "o-rings" are not covered under warranty, nor is damage to the DOSATRON caused by water impurities such as sand. A filter (ex.: 300 mesh - 60 microns depending on your water quality) must be used in front of the DOSATRON for the warranty to be valid.

DOSATRON INTERNATIONAL S.A.S. declines any responsibility if the DOSATRON is not used in compliance with the operating instructions and tolerances as indicated in this owner's manual.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state. But any implied warranty or merchantability or fitness for a particular purpose applicable to this product is limited in duration to the time period of this written warranty or any implied warranty.

There is no warranty express or implied relating in any way to products used in conjunction with DOSATRON INTERNATIONAL S.A.S. products.

The manufacturer or authorized distributor shall not be liable for incidental or consequential damage, such as any economic loss, resulting from breach of this written warranty or any implied warranty.

There are no warranties, express or implied, which extend beyond those described above.

KNOW YOUR FLOW

A SIMPLE METHOD

THE DOSATRON IS COMPOSED OF:

A driving volumetric hydraulic motor piston connected to :

a dosing piston.

In its up and down movement, you can hear the motor piston **click**:

Once in the up position

Once in the down position

2 clicks = 1 motor cycle = The stroke volume

The speed of the motor is proportional to the flow of water passing through the system.

■ Calculation of water flow in l/h =

$$\text{Number of clicks in 15 seconds} = x \quad (4) \times (60) \times (1.7)$$

2 clicks = 1 cycle — (2)

Calculation for 1 minute
Stroke volume in litres

Calculation for 1 hour

■ Calculation of water flow in GPM =

$$\text{Number of clicks in 15 seconds} = x \quad (4) \times (1.7) \times (3.8)$$

2 clicks = 1 cycle — (2)

Calculation for 1 minute
Conversion litres en gallons

Stroke volume in litres

NOTA : This method of calculation cannot replace a flow meter. It is given only as an approximate guide.
